Brain changes during a shamanic trance: Altered modes of consciousness, hemispheric laterality, and systemic psychobiology

Pierre Flor-Henry, Yakov Shapiro and Corine Sombrun

Cogent Psychology (2017), 4: 1313522

[10.1080/23311908.2017.1313522](https://doi.org/10.1080/23311908.2017.1313522)

When this article was first published online, there was an error on page 19, in the paragraph underneath Figure 6, in section 7.3.

The original version of this text stated:

Our findings point at a unified clinical model of altered state experiences based on a shift from the left hemisphere-dominant, verbally based, serial mode of information processing in normative conscious awareness to right hemisphere-dominant, somatosensory-based, parallel mode of information processing in OSC states (Figure 6).

This text should state:

Our findings point at a unified clinical model of altered state experiences based on a shift from the left hemisphere-dominant, verbally based, serial mode of information processing in normative conscious awareness to right hemisphere-dominant, somatosensory-based, parallel mode of information processing in ASC states (Figure 6).

This correction has now been made to the published article online.

The authors apologize for this error.
